Re: AI Engineer - New AI Team

I earned my MSc in Computational Physics from University of Copenhagen (2021-2024). My thesis built an ML optimization tool for complex simulation data, similar to financial planning models.

My GitHub (github.com/philipposk) and 6x7.gr feature extensive MCP/LLM projects, including prompt engineering, RAG setups, agent implementations, LLM evaluation automation, and apps that select the best LLM (Groq/OpenAI) for tasks based on performance/cost. These pipelines also include data processing and training with TensorFlow/PyTorch, anomaly detection, and environmental/microbiological data analysis from my Data Analyst role at University of the Aegean (2022-2023).

I am proficient in Python/ML tools like NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, and parallel MPI/OpenMP. My full-stack apps demonstrate real deployment. I lack agile experience but learn fast and am eager for your empowered teams, flat structure, and PI planning. I like your autonomy and product-focused environment. I am a self-driven, curious, results-oriented team player.

I am available for on-site work and look forward to discussing further.

Best regards,
Filippos Dimitrios Ktistakis
